

The lawyers of JAUSAS working in the practice area of information technology and telecommunications offer our clients complete tax and legal advice regarding new technologies.

Among the principal services we offer in this practice area are the following:

- Analysis and management of legal risks in projects of new technologies and e-businesses, as well as in the area of personal data protection.
- Legal advice for telecommunication companies, multi-media companies and Internet service providers.
- Legal advice for e-businesses and digital marketing.
- Legal advice on the use of metatags and domain names, as well as assistance regarding conflicts arising from their use.
- Protection of the intellectual property regarding contents of portals and digital platforms.
- Drafting of contracts of software development and licensing as well as hardware distribution and maintenance.
- Drafting of all types of contracts for Internet service providers and other companies working in the IT sector and telecommunications; among others, contracts of EDI (Electronic Data Interchange), outsourcing and e-commerce.
- Assistance in the relations with the Spanish authorities in the sector of the new technologies, including advice regarding the application of required licences and authorisations.
- Legal analysis of the security systems and the confidentiality of information in the sectors of telecommunications and e-commerce.
- Legal audits to detect and correct the non-compliances with the current legislation with special emphasis on data protection and security, as well as legal defence before the competent authorities in this sector.
